RESEARCH

Working Papers

“Technological Progress, Retraining, and Retirement”

Revise and Resubmit, Journal of Economics

Description: Extending the model of Hairault et al. (2015), this paper studies the tradeoff between retraining and retirement in a life-cycle search model under technological progress.

“Retirement Age Gap and Population Growth: Externalities in a Non-Age-Directed Labor Market”

Revise and Resubmit, Journal of Economics

Description: This paper extends the life-cycle search model of Hairault et al. (2015) to study the effect of population growth and technological progress on individual retirement behaviors.

“Demographic Composition and the Volatility of Unemployment: A Perspective of Search Frictions”

Working

Description: This short paper provides a theoretical framework connecting demographic structure and aggregate labor-market volatility by constructing a mechanism named as **intertemporal separation multiplier**.
